No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                     8, 2002, 22:10:27; Search time 109.68 Seconds

-!- SUBCELLULAR LOCATION: Type I membrane protein (Probable).
-!- SUBCELLULAR LOCATION: Type I membrane protein (Probable).
-!- ALTERNATIVE PRODUCTS: 4 isoforms; 1 (shown here), 2, 3 and 4; seem to be produced by alternative splicing.
-!- TISSUE SPECIFICITY: Highly expressed in tumor endothelial cells but not in normal endothelial cells.
-!- DOMAIN: Binding to PA seems to be effected through the VWA domain.
-!- SIMILARITY: BELONGS TO THE ATR FAMILY.
-!- SIMILARITY: CONTAINS 1 VWFA DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (ISOFORM 3).

MAXWell S.A., Davis G.E.;

"Differential gene expression during capillary morphogenesis in 3D collagen matrices: regulated expression of genes involved in basement membrane matrix assembly, cell cycle progression, cellular differentiation and G-protein signaling.";

J. Cell Sci. 114:2755-2773(2001).

SUBUNIT: Seems to bind to collagen type IV and laminin.

SUBCELLULAR LOCATION: Type I membrane protein (Probable).

SIMILARITY: BELONGS TO THE ATR FAMILY.

"The extracellular matrix of Volvox carteri: molecular structure of
the cellular compartment.";
J. Cell Biol. 109:3493-3501(198).
-:- FUNCTION: THE EXTRACELLULAR MATRIX (ECM) OF VOLVOX CONTAINS
INSOLUBLE FIBROUS LAYERS THAT SURROUND INDIVIDUAL CELLS AT A
DISTANCE TO FORM CONTIGUOUS CELLULAR COMPARTMENTS. SSG 185 IS TH
MONOMERIC PRECURSOR OF THIS SUBSTRUCTURE (23 STRUCTURE). THE
COVALENT CROSS-LIRKS ARE FORMED BETWEEN THE SACCHARIDE CHAINS
RATHER THAN BETWEEN THE POLYPEPTIDE CHAINS.
-!- FTM: A CENTRAL DOMAIN OF 77 AA CONSISTS ALMOST EXCLUSIVELY OF
HYDROXYPROLINE RESIDUES.

Proc. Natl. Acad. Sci. U.S.A. 90:5554-5558(1993).

CC - FUNCTION: IS IMPORTANT FOR THE MORPHOGENESIS OF LIMB AND KIDNEY
AND MAY HAVE A FUNCTION IN DIFFERENTIATED CELLS OR MAY BE
INVOLVED IN MAINTAINING SPECIFIC DIFFERENTIATED STATES.

CC -- SUBCELLIGHAR LOCATION: Nuclear.

CC -- SUBCELLIGHAR LOCATION: Nuclear.

II, III AND IV (AC 005899); ARE PRODUCED BY ALTERNATIVE SPLICING.

CC -- SIMILARITY SPLICING IS SEEN AMONG DIFFERENT TISSUES AND
DIFFERENT SIZE TRANSCRIPES EXIST MITHIN ANY ONE TISSUE AND
DIFFERENT SIZE TRANSCRIPES EXIST MITHIN ANY ONE TISSUES

C -- TISSUE SPECIFICITY: IT IS PRESENT IN THE ADULT KIDNEY, TESTIS,
LIMB, OVARY, BRAIN, SMALL INTESTINE, SALIVARY GLAND AND HARDERIAN

C -- DEVELOPMENTAL STAGE: IN THE DEVELLOPING LIMB BUD, THE PROTEIN

C -- DEVELOPMENTAL STAGE: IN THE DEVELLOPING LIMB BUD, THE MESENCHYMAL

C COMPARTMENT, PREDOMINANTLY IN THE POSTERIOR REGION. DURING
KIDNEY MORPHOGENESIS, EXPRESSION IS INITIALLY RESTRICTED TO
THE EPITHELIAL COMPARTMENT OF THE PRONEPHROS.

C -- SIMILARITY: CONTAINS I FORMIN HOMOLOGY PAMILY. CAPPUCCINO
SIMILARITY: BELONGS TO THE FORMIN HOMOLOGY FAMILY. CAPPUCCINO
SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This SWISS-PROT entry is copyright. novel. mutattons: "18 and the syndrome in Argentina: 17 unique, including nine
novel. mutattons: Possible Regularor Perhyphoryte and Platelet Function.
-: PUNCTION: POSSIBLE REGULATOR PETHWAYS WITH CYPOSKELETAL FUNCTION.
-: FUNCTION: POSSIBLE REGULATOR PATHWAYS WITH CYPOSKELETAL FUNCTION.
-: SUBBUNT: BINDS TO CDG42, RAC, NCK, FYN, SRC KINASE FGR, BTK, ABL,
MIP, AND TO THE P85 SUBBUIT OF PLC-GAMMA.

-: TISSUE SPECIFICITY: EXPRESSED PREDOMINANTLY IN THE THYMUS. ALSO
FOUND, TO A MUCH LESSER EXTENT, IN THE SPLEEN.
-: DOMAIN: THE WHI (WASP HOMOLOGY 1) DOMAIN MAY BIND A PRO-RICH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MEDITINE-99378988; PubMed-9713366; M. Essential for maintenance of normal retinal and cochlear function.
SUBCELLUIAR LOCATION: Type I membrane protein (By similarity).
TISSUE SPECIFICITY: Expressed in brain, lung, kidney, spleen and restis. Found also in the inner and outer synaptic layers, and the nerve fiber layer in adult and fetal retinas. Found in the supporting cells, outer sulcus cells and spiral ganglion of fetal
                                                                                                                                                                                                                                                                                                                                                                                                                           TISSUE-Fetal brain;

"Mutations in the novel protocadherin PCDH15 cause Usher syndrome type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DISEASE: Defects in PCDH15 are the cause of Usher syndrome type 1F (USH1P). Usher syndrome type 1 is a autosomal recessive disorder characterized by congenital profound sensorineural hearing loss, constant vestibular dysfunction and prepubertal onset of retinitis spignentosa leading to blindness. Usher syndrome is the most common cause of combined deafness and blindness in developed countries. SIMILARITY: CONTAINS I CADHERIN DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PubMed=11398101;

ASSOCIATES WITH BETA-2.

ASSOCIATES WITH BETA-2.

SUBCELULAR LOCATION: Type I membrane protein.

TISSUE SPECIFICITY: EXPRESSED MODERATELY ON MYELOMONOCYTIC CELL

TISSUE SPECIFICITY: EXPRESSED MODERATES AND STRONGLY ON

LINES AND SUBSETS OF PERIPHERAL BLOOD LEUKOCYTES AND STRONGLY ON

TISSUE-SPECIALIZED CELLS, INCLUDING MACROPHAGES FOAM CELLS WITHIN

ATHEROSCLEROTIC PLAQUES, AND ON SPLENIC RED PULP WACROPHAGES.

DOMAIN: THE INTEGRIN LOMAIN (INSERT) IS A WHFA DOMAIN. INTEGRINS

WITH I-DOMAINS DO NOT UNDERGO PROTEASE CLEAVAGE.

SIMILARITY: GLONGS TO THE INTEGRIN ALPHA CHAIN FAMILY.

SIMILARITY: CONTAINS 7 FG-GAP REPEATS.

INTEGRINS WITH I-DOMAINS DO NOT UNDERGO PROTEASE CLEAVAGE.
SIMILARITY: BELOGS TO THE INTEGRIN ALPHA CHAIN FAMILY.
SIMILARITY: CONTAINS 1 VWFA DOMAIN.
SIMILARITY: CONTAINS 7 FG-GAP REPEATS.

RECORNIES THE SEQUENCE G-P-R IN FIBRINGEN. IT MEDIATES CELL-CELL

RECORNIES THE SEQUENCE G-P-R IN PIBRINGEN. IT IS ESPECIALLY

C. INTERACTION DURING INFLAMMATORY RESPONSES. IT IS ESPECIALLY

MADORYANT IN MONOCYTE ADHESTON AND CHEMOTAXIS.

IMPORTANT IN MONOCYTE ADHESTON AND A BETA SUBUNIT. ALPHA-X

ASSOCIATES WITH BETA-2.

1 SUBUNIT: REPERSORIES TO I membrane protein.

1 SESUE SPECIFICITY: PREDOMINANTLY EXPRESSED IN MONOCYTES AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SEQUENCE FROM N.A. ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND A SHORT FORM; ARE PRODUCED BY ALTERNATIVE SPLICING. THE FINAL TISSUE FORM OF COLLAGEN XII MAY CONTAIN HOMOTRIMERS OF EITHER THE LONGER OR THE SHORTER ISOFORM OR ANY COMBINATION OF LONG AND SHORT ISOFORM CHAINS. ONLY THE LONG VARIANT IS A PROTEOGLYCAN. THE LARGE ISOFORM HAS MORE RESTRICTED EXPRESSION IN EMBRYONIC TISSUE THAN
                                                                                                                                                                                                                                     MEDLINE-92011862: Pubbled-1918137;
Yamagata M., Yamada K.M., Yamada S.S., Shinomura T., Tanaka H.,
Nishida Y., Obara M., Kimata K.;
The complete primary structure of type XII collagen shows a chimeric
molecule with reliterated fibronectin type III motifs, von Willebrand
factor A motifs, a domain homologous to a noncollagenous region of
type IX collagen, and short collagenous domains with an Arg-Gly-Asp
site.;
